

Introducing the Twiddler

Your tiny keyboard-to-go

The Twiddler is a one-handed keyboard and mouse that lets you type faster wherever you go.

"I've been using the Twiddler since the original came out in 1992. It's the fastest mobile typing device we have tested at Georgia Tech, and unlike many other devices, you can use it without looking."

-Thad Starner

Associate Professor, School of Interactive Computing, Georgia Tech

We spent several months working with Google Glass to redesign the Twiddler to make it better than ever. It's now one of the smallest, lightest, fastest and easiest keyboards around.

It is fully programmable and places the functionality of a full keyboard into the palm of your hand in just 16 keys. Combining major innovations in pointer and keyboard technology, the Twiddler is designed to bring renewed enjoyment to current computer users and to attract newcomers to the world of wearable computing.

This pocket-sized, ergonomically designed wireless accessory gives you more features than a desktop keyboard and connects instantly to tablets, smartphones, computers and the latest wearables.

Chord and Customize

Give it your personal touch

You can program and change the keys to suit your needs. You can even set it to store blocks of text that can be typed with a single chord making dreaded data entry as easy as can be.

With a little practice, average users can type 30-60 wpm. The handy customization features allows you to key in anything up to 260 wpm.

Mouse and Keyboard

Look ma! One hand!

The Twiddler incorporates a keyboard which is radically unique - an ergonomic, small and lightweight keypad you can hold in the palm of your hand or slip into a pocket.

To type with the Twiddler, you press one or more keys at a time. With 12 finger keys and four thumb keys, the Twiddler can do anything a standard keyboard can do and more.

The Twiddler can be used as a mouse too. Moving the multifunction NavStick makes it act as a mouse. Push to click, or use the top three finger keys in the front for left/middle/right click.

Typing Tutor

As fast as a Quick Brown Fox...

Chording is surprisingly easy to learn and the Twiddler3 makes it easier with its helpful [Twiddler Tutor](#), an intuitive teaching tool to help you get the most out of your Twiddler.

Spending just 5 minutes a day with the tutor can help you learn the 16 key system incredibly fast.

Twiddle in Any Language?

Mais oui!

The Twiddler is so easy to program, that you can use it to type in any language. Customize your Twiddler [here](#), or upload one of the pre-programmed UIs already there.
